

Robert Hettich: Picture "Odemata" (2023)

€2,700.00

The work presents a magical cityscape characterized by soft shadows and intense colour contrasts. The composition is characterized by strong colors and dynamic forms that give the viewer an impression of movement and liveliness. The depiction skillfully walks the line between the real and the unreal, between the concrete and the abstract. This ambivalence invites the viewer to think their way into the painting from their own perspective and to interpret it. "Odemata" is an example of the ability to combine emotional depth and visual complexity in the work. It invites the viewer to immerse themselves in a world that seems both familiar and strange at the same time, stimulating fantasy and imagination.
